

# Bellis

Timeless, classic and modern at the same time, this wind and terrace screen has a clean design and a robust, transparent appearance. The standard height of 1.50 m provides very effective protection from the wind. In short: the perfect wind and terrace screen for all seasons that offers your customers maximum comfort.

The screen elements consist of two panels. Individual panels can be fitted with hardened safety glass or high-pressure laminated plastic.

It is also possible to have your own logo or text printed on the panels, which means that your screen not only provides protection against the elements, but also advertises your business.

# Bellis

The screen is available in standard widths of 70, 135 or 200 cm and has a standard height of 150 cm. Custom sizes are also possible upon request.

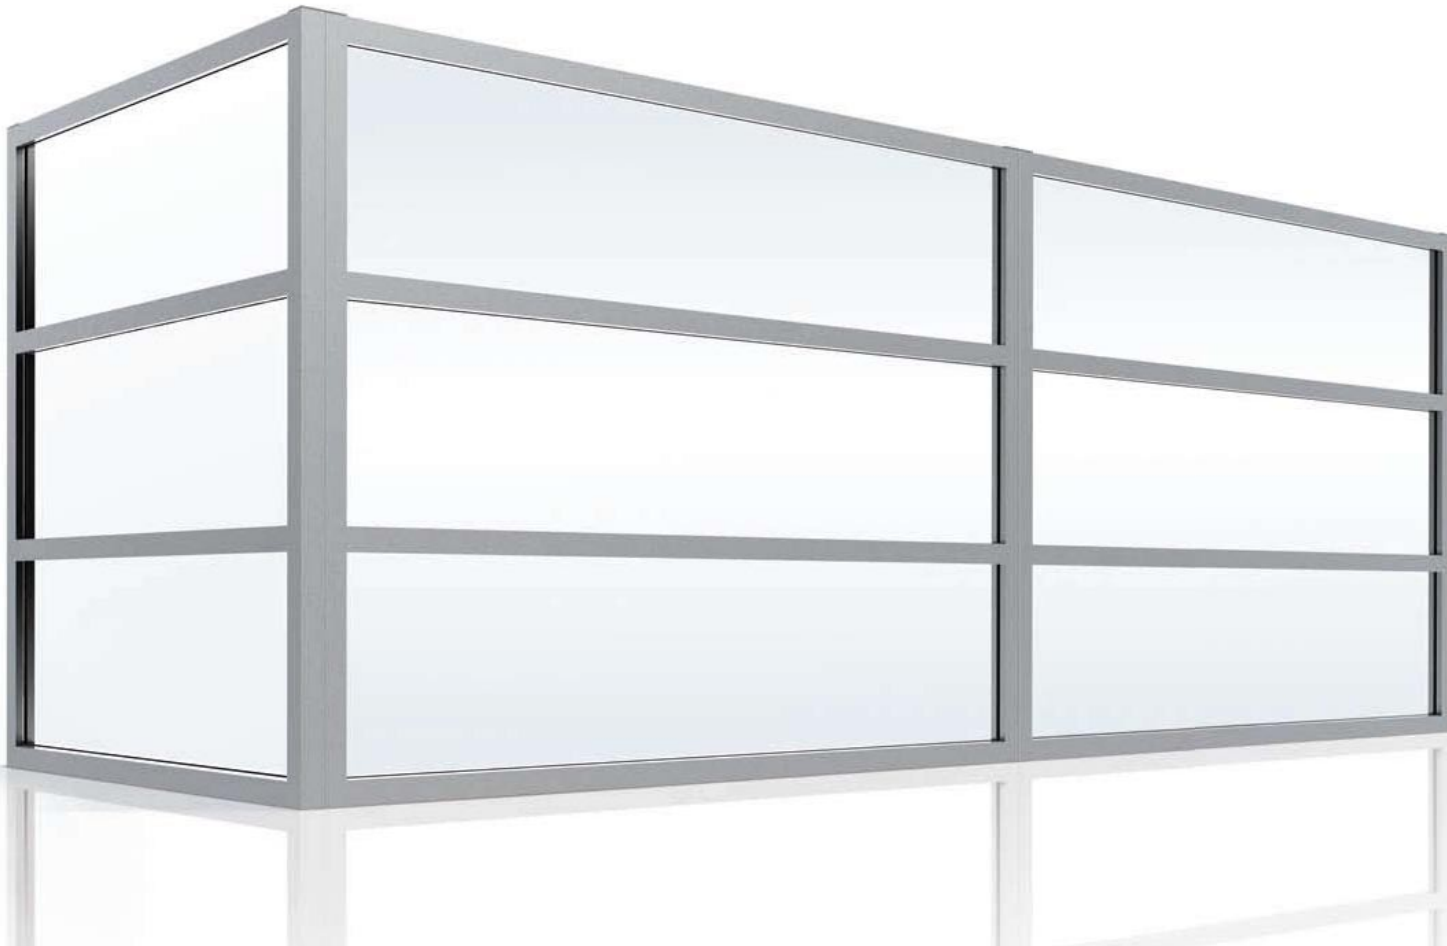

# Gypsy

This popular terrace screen has a clean, neutral design with a robust and transparent appearance. The standard height of 1.50 m provides very effective protection from the wind, while customers are still able to enjoy the view. In short: the perfect wind and terrace screen for all seasons that offers your customers maximum comfort.

The screen elements consist of three panels of the same size. You can choose whether individual panels are fitted with hardened safety glass or high-pressure laminated plastic.

It is also possible to have your own logo or text printed on the panels, which means that your screen not only provides protection against the elements, but also advertises your business.

# Gypsy

This terrace screen is available in standard widths of 70, 135 or 200 cm and has a standard height of 150 cm. Custom sizes are also possible upon request.

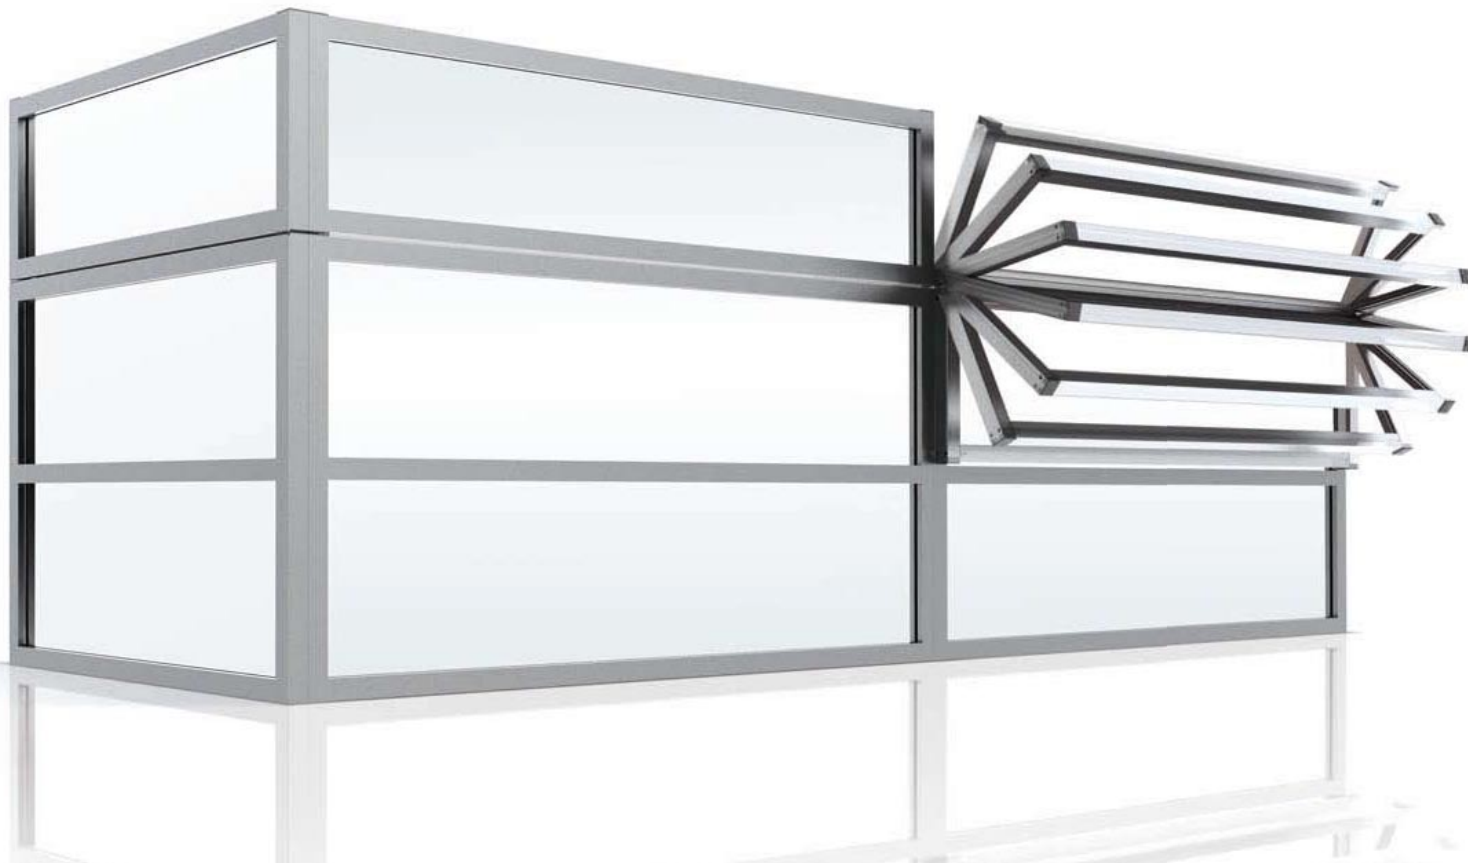

# Hebe

The Hebe is based on the 'Gypsy' model. The top part can be folded down so that the wind screen can be lowered on hot days. The main difference with a sliding screen is that folding terrace screens are not susceptible to the effects of the weather. Sand, leaves and dirt doesn't get in between the panels, something that can also result in damage.

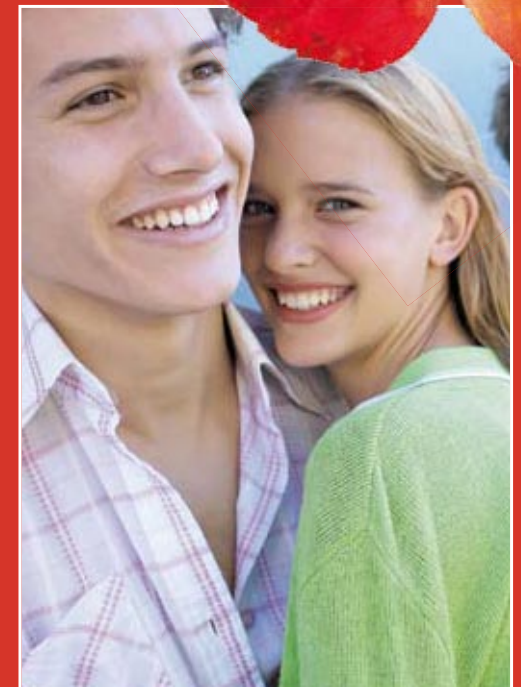

Because the top panel can be folded down, this terrace screen is suitable for use in all seasons. You can adjust the climate on your terrace at any time of the day. On a summer's day, you can allow a pleasant breeze, or conversely, provide complete protection on cold, windy days.

The screen elements consist of three panels of the same size. You can choose whether individual panels are fitted with hardened safety glass or high-pressure laminated plastic. It is also possible to have your own logo or text printed on the panels, which means that your screen not only provides protection against the elements, but also advertises your business.

# Hebe

This terrace screen is available in standard widths of 70, 135 or 200 cm and has a standard height of 150 cm. Custom sizes are also possible upon request.

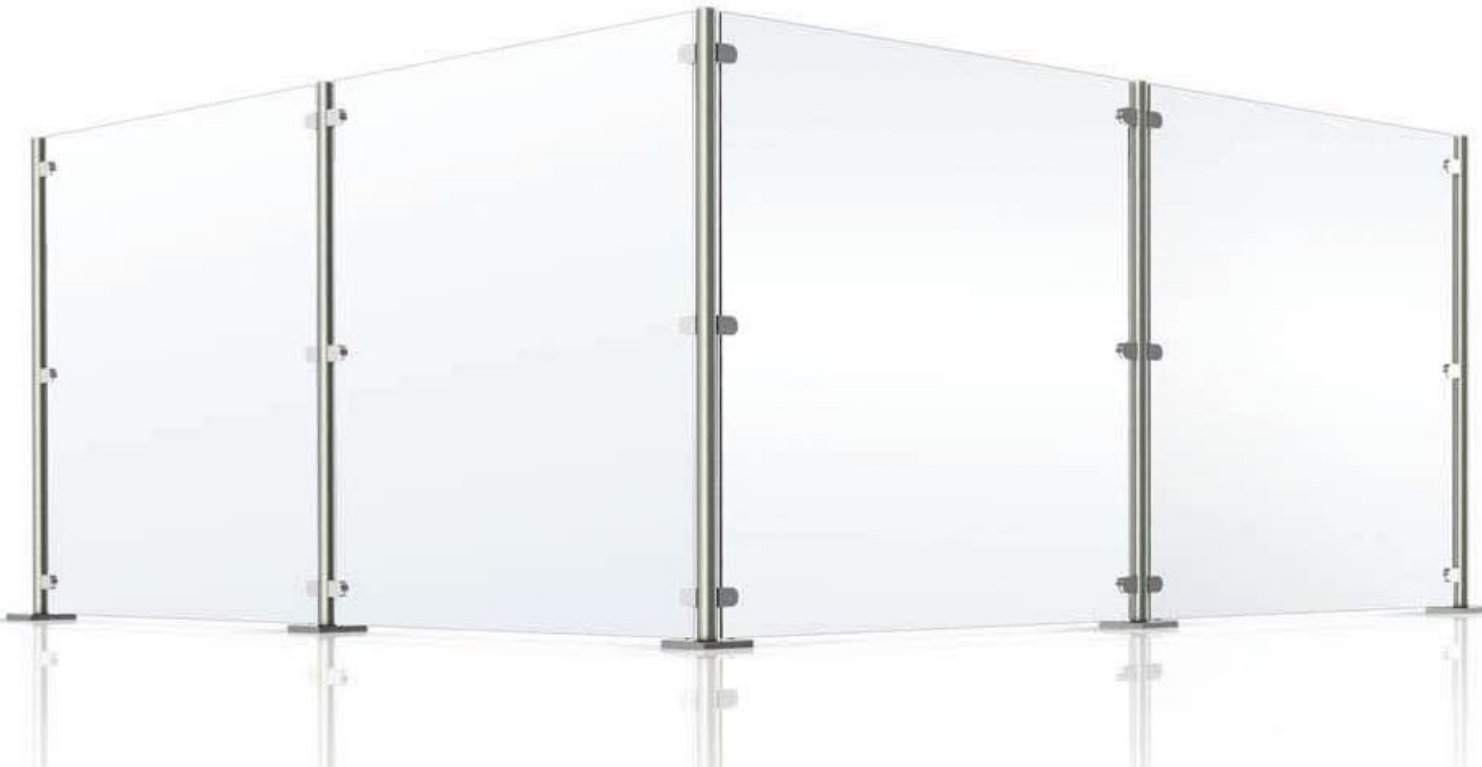

# Hedra

Transparency is the keyword. This popular terrace screen has a clean and transparent design.

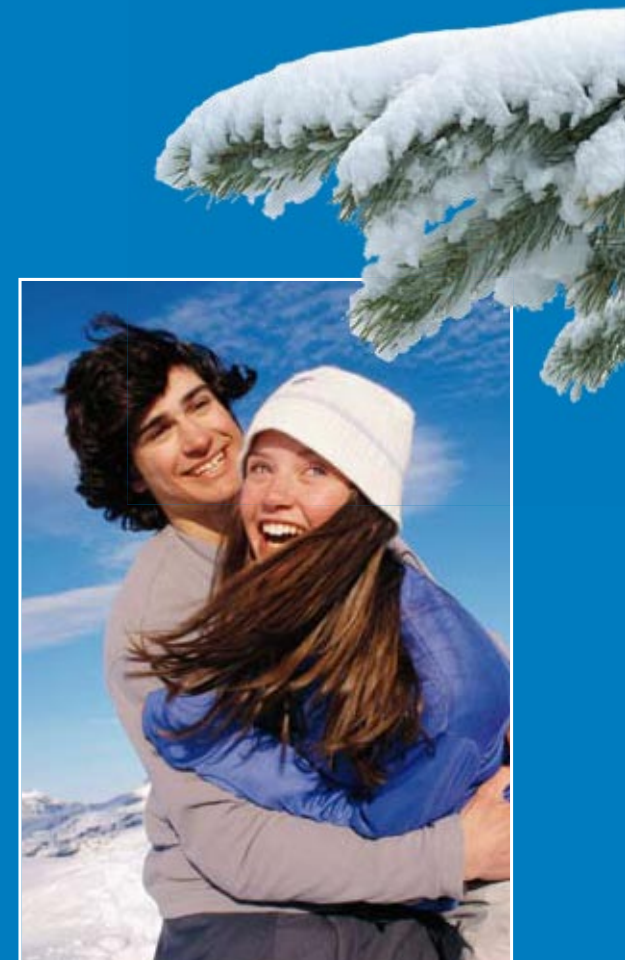

All glass panels have polished cut edges. The dimensions of the panels are made to order. In short: the perfect wind and terrace screen for all seasons that offers your customers maximum comfort.

The screen consists of round stainless steel pillars and hardened safety glass.

# Hedra

This terrace screen has no fixed width. We can adjust that to your wishes. Standard heights are 70, 110 and 150 cm. Custom sizes are also possible upon request.

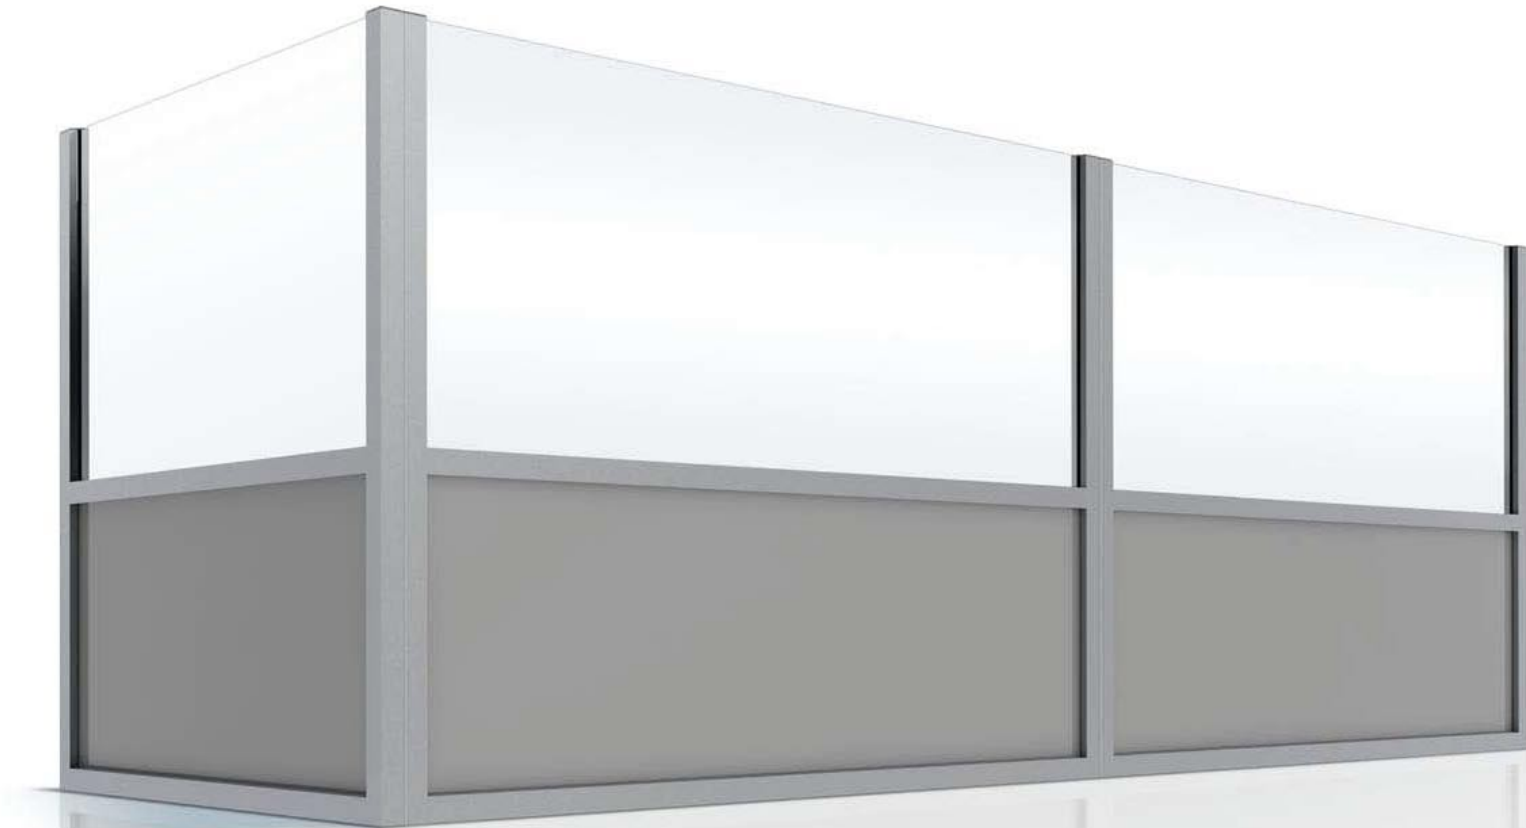

# Hibis

Transparency is the keyword. This popular terrace screen has a clean and transparent design. The transparency of the screen is increased because there is no bar over the upper panels, which are polished. The standard height of 1.50 m provides very effective protection from the wind, while customers are able to enjoy the view.

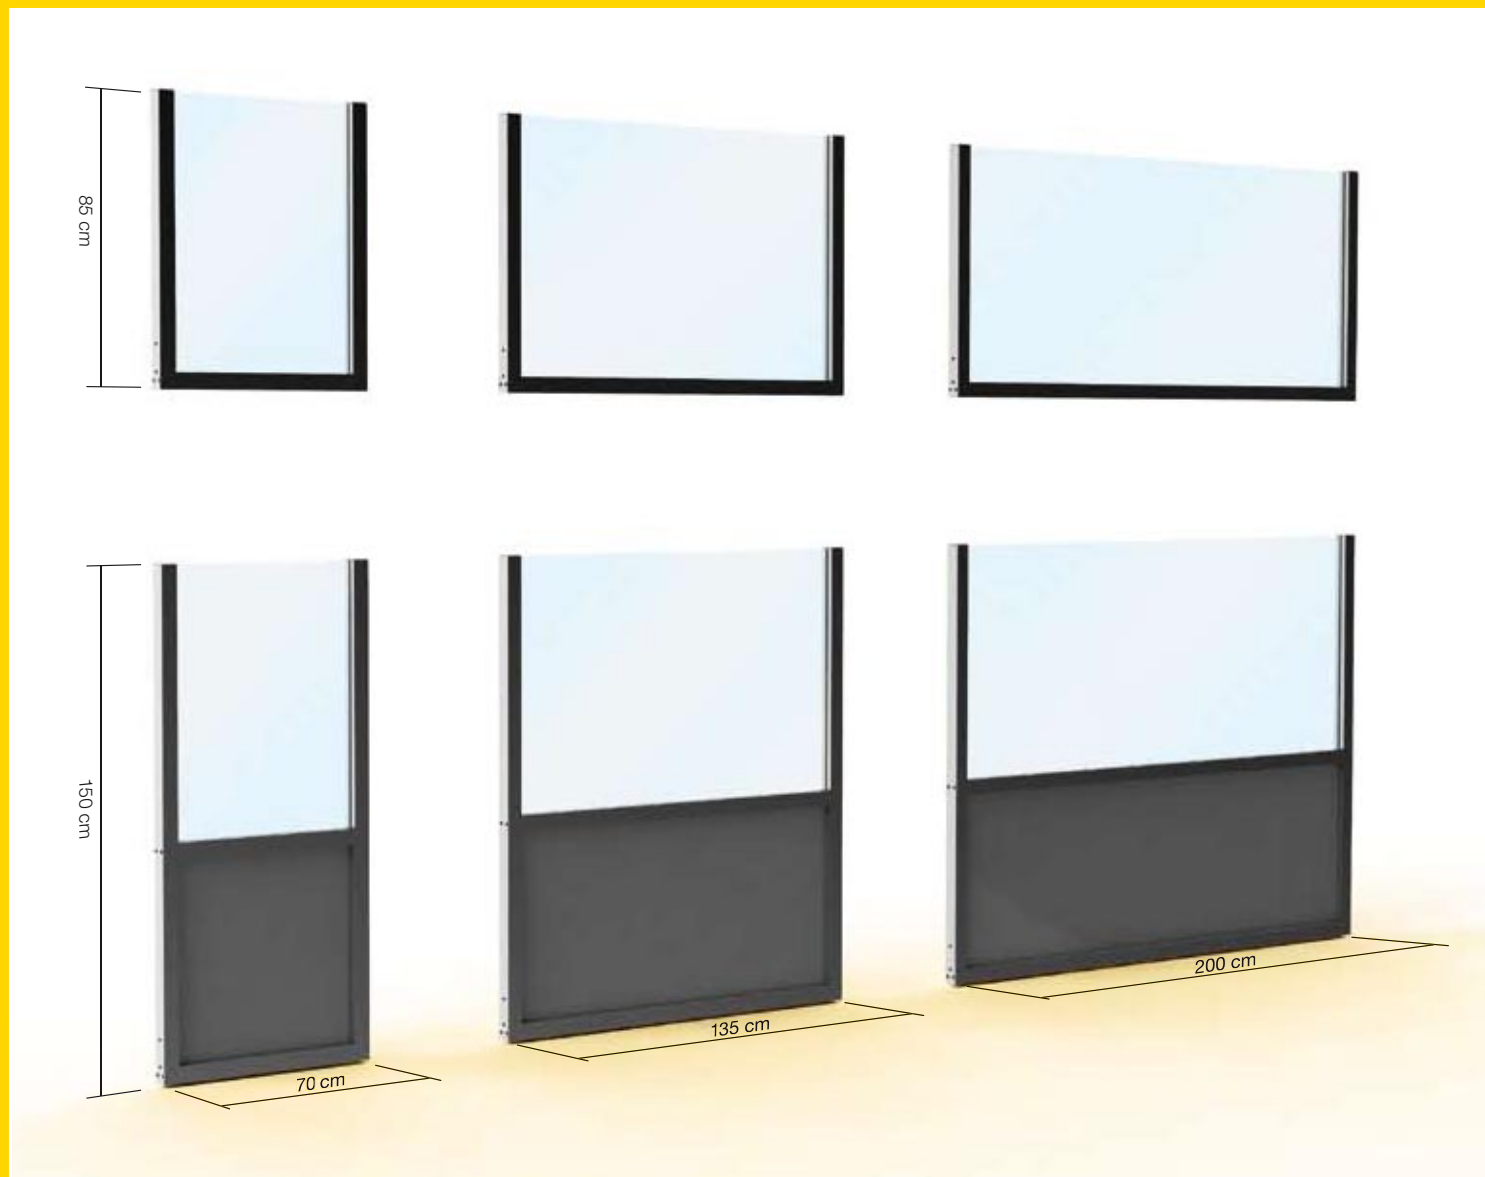

The screen elements consist of two panels. For the lower panel, a choice can be made between hardened safety glass or a high pressure laminated plastic panel.

It is also possible to have your own logo or text printed on the panels, which means that your screen not only provides protection against the elements, but also advertises your business.

# Hibis

This terrace screen is available in standard widths of 70, 135 or 200 cm and has a standard height of 150 cm. Custom sizes are also possible upon request.

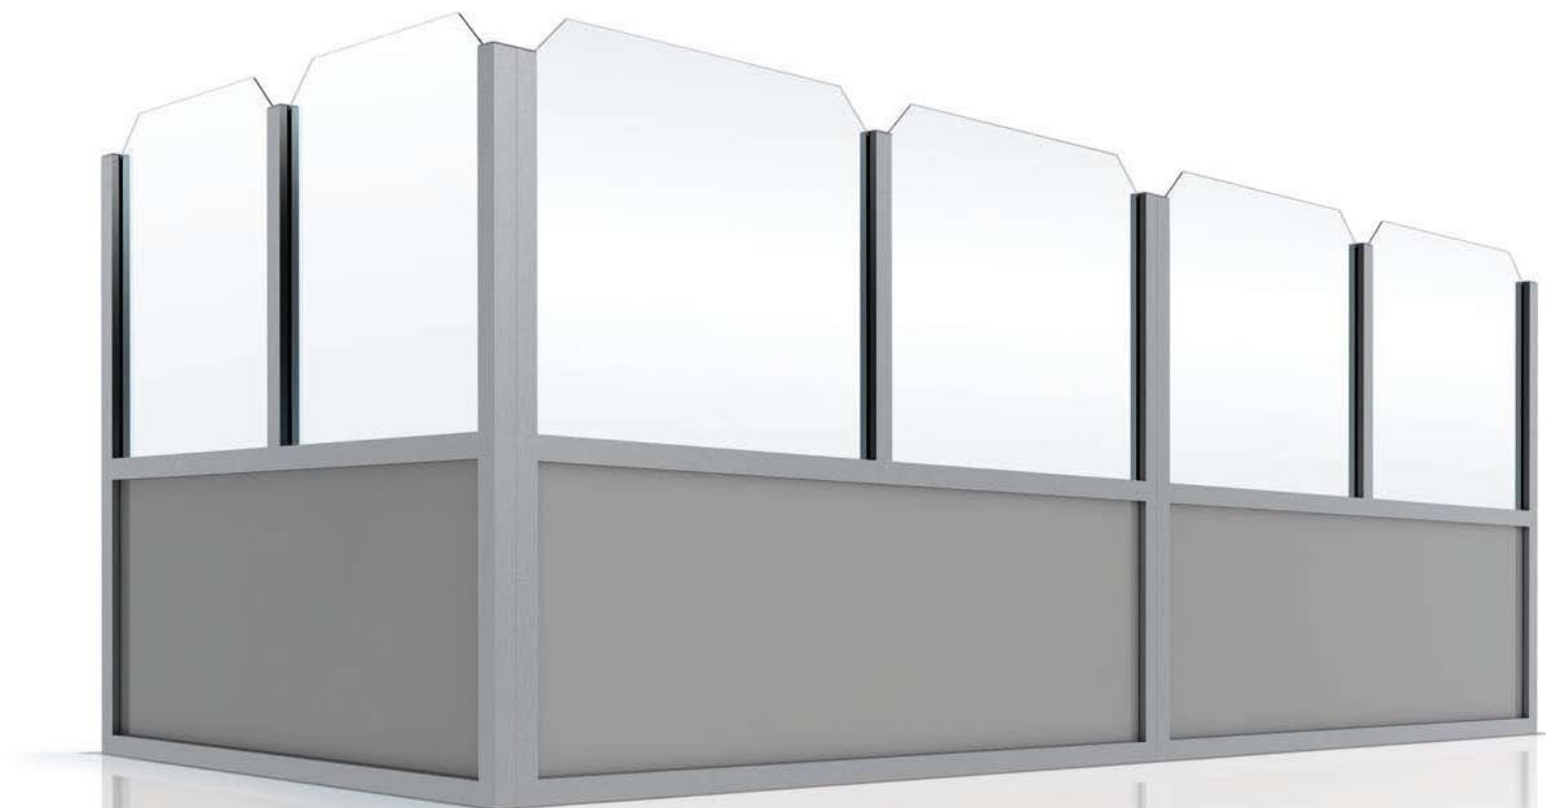

# Ilex

A sturdy terrace screen characterised by a frisky, classic appearance. The stylish design with angled top panels results in a transparent design that is easy on the eye, giving the customers the comfort they are looking for. The standard height of 1.50 m provides very effective protection from the wind, while customers are able to enjoy the view.

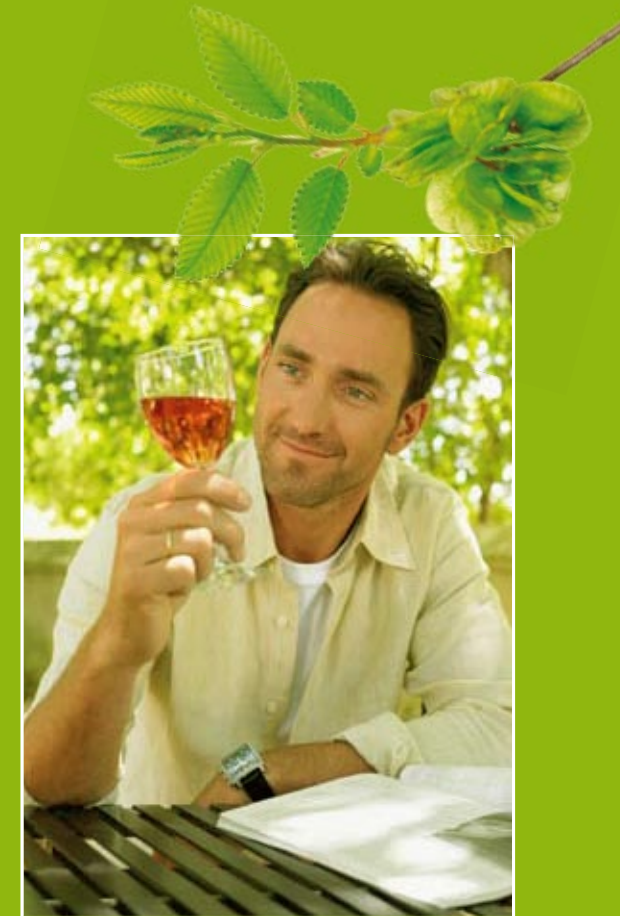

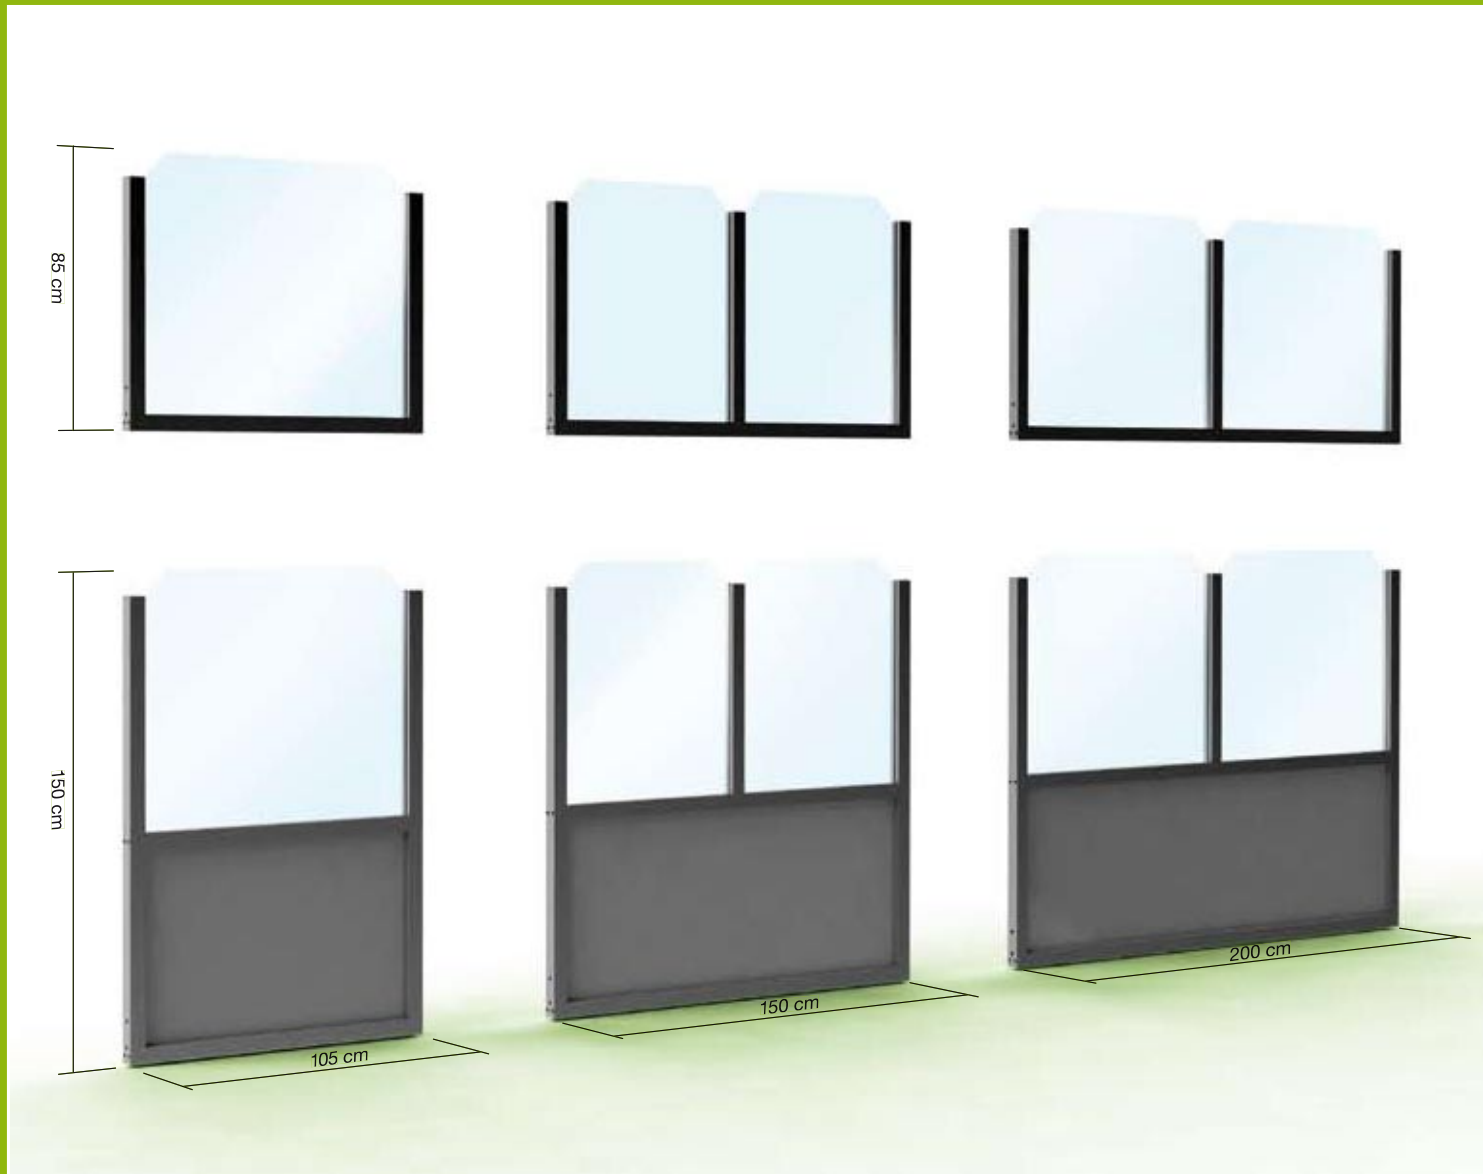

The screen elements consist of a lower panel and angled top panels made of hardened safety glass. For the lower panel, a choice can be made between hardened safety glass or a high pressure laminated plastic panel.

It is also possible to have your own logo or text printed on the panels, which means that your screen not only provides protection against the elements, but also advertises your business.

# Ilex

This terrace screen is available in standard widths of 105, 150 or 200 cm and has a standard height of 150 cm. Custom sizes are also possible upon request.

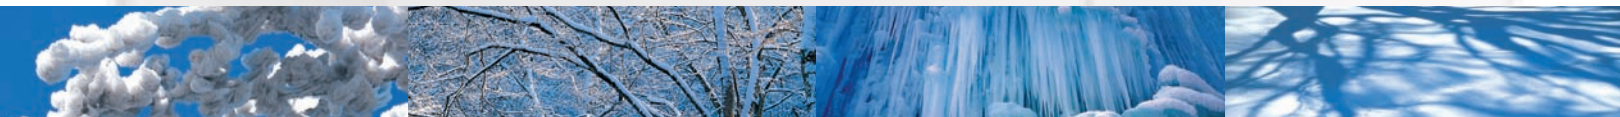

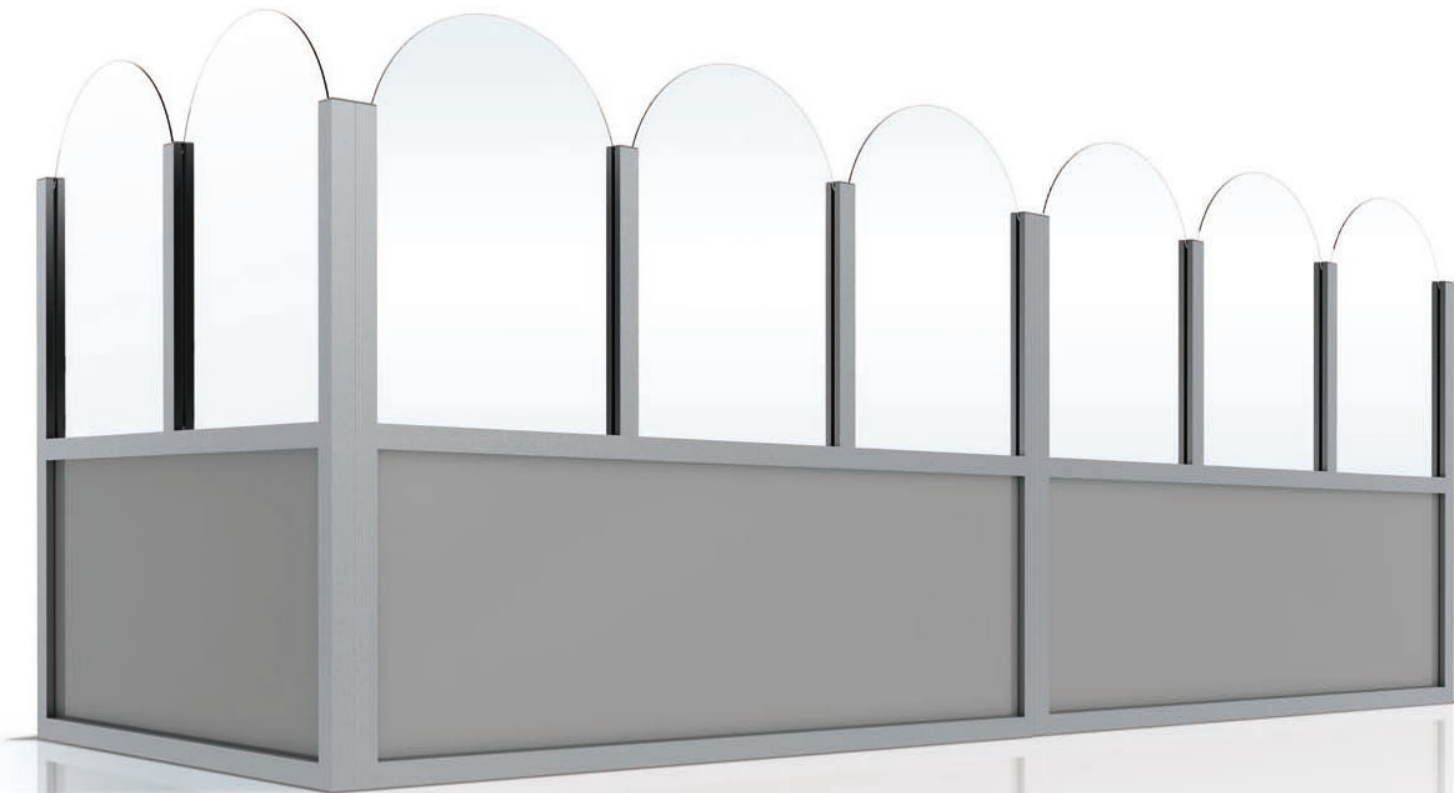

# Picea

Frivolous and frisky: a robust terrace screen that is often used where an extra accent is needed. The stylishly rounded top panels give the screen a Mediterranean look, creating the ambience customers are looking for. The standard height of 1.55 m provides very effective protection from the wind, while customers are able to enjoy the view.

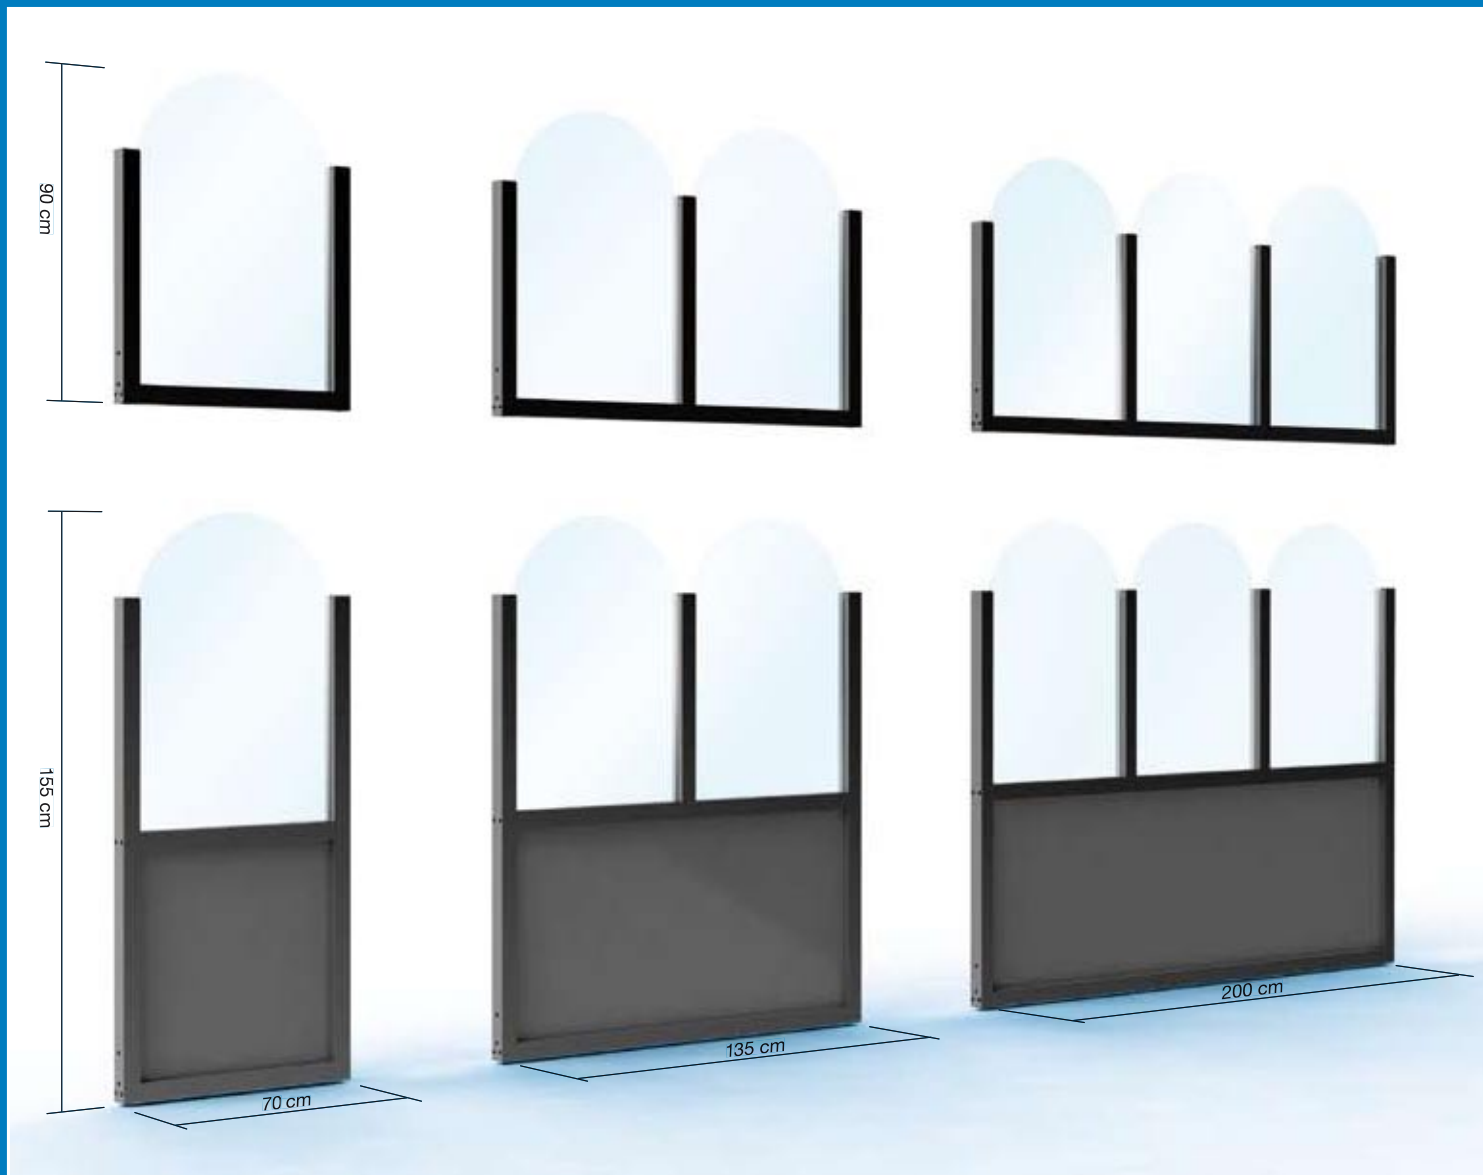

The screen elements consist of a lower panel and arched top panels made of hardened safety glass. For the lower panel, a choice can be made between hardened glass or a high pressure laminated plastic panel.

It is also possible to have your own logo or text printed on the panels, which means that your screen not only provides protection against the elements, but also advertises your business.

# Picea

This terrace screen is available in standard widths of 70, 135 or 200 cm and has a standard height of 155 cm. Custom sizes are also possible upon request.

# Salvia

A classic design and “soft” appearance have earned “Salvia” its place in our range. The slightly arched top panel is its most important characteristic. The standard height of 1.35 m provides very effective protection from the wind, while customers are able to enjoy the view.

The screen elements consist of a curved glass panel at the top and a lower panel made of hardened safety glass or a high pressure laminated plastic panel.

It is also possible to have your own logo or text on the panels, which means that your screen not only provides protection against the elements, but also advertises your business.

# Salvia

This terrace screen is available in standard widths of 110, 150 or 200 cm and has a standard height of 135 cm. Custom sizes are also possible upon request.
